

AMENDMENTS TO THE SPECIFICATION

Kindly amend paragraph [0025] of the specification as shown below:

[0025] After the FSM is generated, the dialog application generation process of FIG. [[2]] 1 then proceeds to step 108 where dialog application code is generated from the FSM, which generation process provides user-modifiable functions for every point in the call flow. In many cases, little modification to the generated code is required, and for simple applications, no modification may be necessary.
